Profile

Innovative Game Design and Development student based in Australia. Experienced in working with tight deadlines with teams in an agile environment and taking both worker and leadership roles. Excellent communication skills both in written and verbal in both longform technical documentation as in design documents and shorter explanatory methods such as ERDs, cause and effect diagrams and storyboarding.

Technical Skills

- C# fluency
- Unity expertise
- Java experience
- Passion for Level Design
- Short deadline development
- Comfort in Agile work environment
- Narrative based design

My expertise in in areas of development helps me communicate with the development team to make the design and mechanics as deeply intertwined and seamless as possible. As well as work experience in hospitality as well as university experience allowing me to work in high pressure small teamwork environments where quick, concise and effective communication is key.

Executive

Macquarie League of Legends Society

2021-present

Managing the biggest university affiliated gaming society as well as organising events and having a deep knowledge of current trends in the games industry from the perspective of youth customers

Hobbies and Interests

Lover of all things roleplay and narrative design. A forever DM always working to create interesting and rich one-shots or campaigns for players. Amateur writer and literature enthusiast and a deep love for football, both watching and playing, especially between the sticks.

My love for design is equivalent in all mediums and particularly in games I enjoy playing as well as designing scenarios where the system and the design work cohesively to push player emotions and narrative. A general aloof personality trying to keep everyone around me light but hunkering down and getting work done when needed.
